CERTEX Model 3200

Computer Interface Checksigner

- Stand Alone And Computer Interface

- For Continuous Form And Single Sheet Checks

- Multi-Currency Capability

The CERTEX Model 3200 is the most comprehensive checkwriting solution available today. It combines the features of a stand alone checkwriter and a computer interface check Protector and signer in one unit.

STAND ALONE: Simply connect the Model 3200 to your favorite matrix or laser printer. Set the position of the date, amount, signature(s), payee, MICR line and begin issuing checks that are professional looking and secure. Optional full size keyboard allows you to add full payee information.

COMPUTER INTERFACE: Connect the unit between your computer and printer. Set the amount and signature positions then run your checkwriting program. Checks are printed, protected and signed in one operation - in a controlled environment.

CONTROL the checkwriting function of your business by controlling your accounts payable or payroll program. The Model 3200 protects your check - the key to your bank account.

PRODUCTIVITY will increase when you use Certex to print, protect, and sign your checks in one operation. The 3200 has the ability to digitally store forms, so it can be used to create entire documents. Checks, money orders, cashiers checks and certificates, including the **MICR** line, can be printed on blank safety paper.

SECURE SIGNATURES are controlled by keylock and passwords. Manager assigns operator passwords with dollar limits on amounts and signatures.

FLEXIBILITY is built into the Model 3200. The unit may be programmed on site with the keypad or optional keyboard. to accommodate your particular system requirements.

TIME SAVINGS: Unit will print, protect, and sign checks in one operation without changing system or program.

SECURITY FEATURES: Protected amount numerals help prevent alteration and give a more professional appearance to the check. Executive and operator passwords provide controlled access. Nonresettable item counter records all use.

REPORTS: In the stand alone mode, the unit will record and report check amount, date, and number, as well as operator and batch identification.

PROGRAMMABLE: Using the keypad or optional full size keyboard and the display, executive may set the unit for several check formats. Digitized signatures are stored in EPROM chip. User may configure for a 9 or 24 pin matrix, or a laser printer.

INTERFACE: Input - RS232 (serial) 300 -38400 baud or a
            Parallel (Centronics) connection.
            Unit may be configured through the
            keypad or optional keyboard.
      Output - Parallel (Centronics)
